Kursbeschreibung

As a framework for Agile Project Management, Scrum is designed to carry out complex projects in an effective and flexible manner. Its foundation consists of iterative, incremental workflows, and it encourages team members to work closely together. Through regular sprints, daily stand-ups, sprint reviews and retrospectives, work stays transparent and can adapt to change. Key priorities in Scrum are delivering functioning products quickly, learning continuously and making adjustments in response to feedback from customers and the team.

This online course prepares you for the PSM I (Professional Scrum Master I) exam. You will acquire thorough expertise in the Agile project management framework Scrum, and practical examples show you how products are developed in complex settings. Even seasoned project managers depend on strong organization and self-management, which is why the course covers time, self and stress management alongside the technical content.

Your learning objectives at a glance

Grasp what Scrum is as a framework for Agile project management

Identify the roles, artifacts and events defined in Scrum

Comprehend Agile values and principles and how they relate to the Scrum process

Design a communication strategy that enables the Scrum team to work together effectively

Use Agile techniques and tools in practice

Get to know how Scrum is scaled across larger projects or organizations

Build know-how on handling stress, formulate SMART goals, prioritize and adapt the planning of tasks

02
